Task	Status
Load and process review data	Completed
View all reviews for a specific park	Completed
Count reviews from a specific location	Completed
Calculate average rating for a park in a specific year	Completed
Display average score per park by location	Completed
Export park data to text, CSV, and JSON formats	Completed
Visualize data with pie charts and bar charts	Completed
Show top 10 locations by average rating for a park	Completed
Display average rating by month for a park	Completed
Conform to PEP8 standards	Completed
Implement a class diagram for OOP	Completed

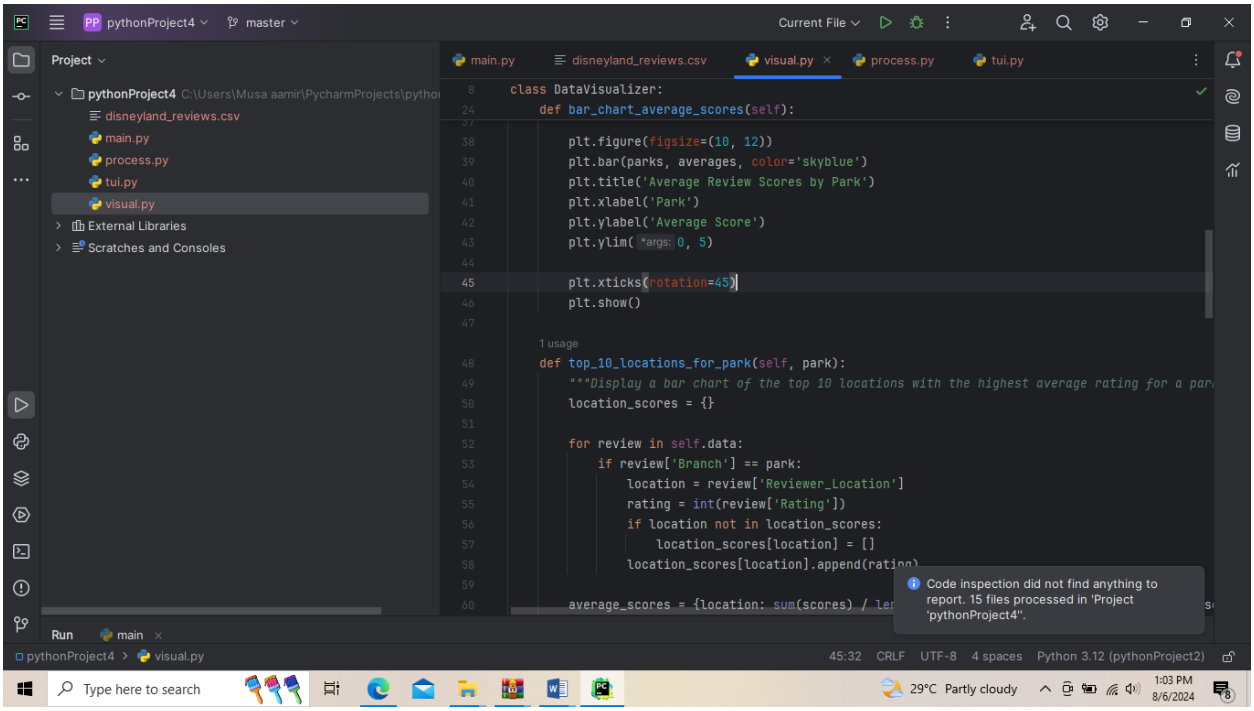
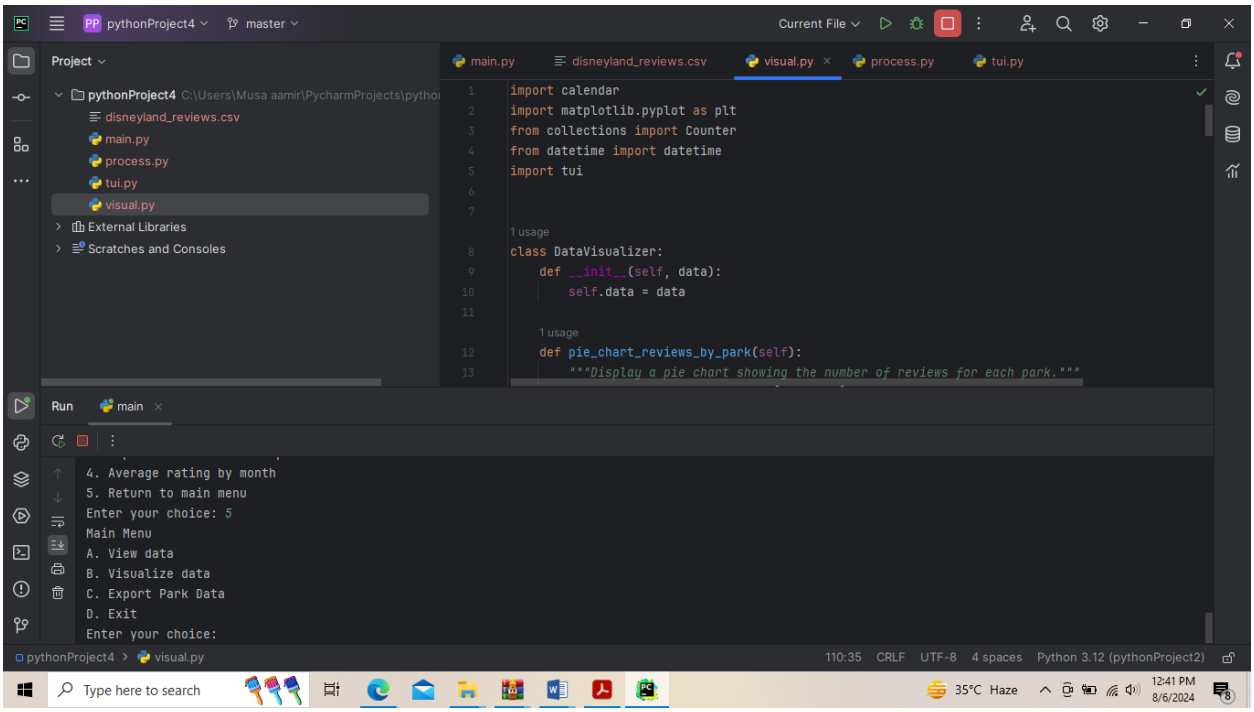
PEP8 Conformance Statement

As part of the development process, all code was checked for PEP8 compliance using PyCharm's built-in code inspection tools. The inspection revealed no PEP8 errors or warnings, indicating that the code adheres to the PEP8 standards. The following steps were taken to ensure compliance:

1. **Code Inspection**: The entire project was inspected using PyCharm's `Inspect Code` feature.
2. **Automatic and Manual Fixes**: Any minor issues detected during development were promptly fixed using PyCharm's quick fixes or manually, ensuring clean and readable code.

The screenshot below shows the results of the final code inspection, confirming that there are no PEP8 violations.





git commit -m "load and process review data ,View all reviews for a specific park ,Count reviews from a specific location and Calculate average rating for a park in a specific yearCompleted"
